Objectives	 To help learners to improve their k To enable them to use vocabulary a contexts To support learners to acquire liste To facilitate them to develop their strategies To equip them with writing skills n 	approp ning ar	riately i	n differ king ski by fami	ent acaden lls liarizing d	ifferent	types of reading
Outcomes	At the end of the course, the learners will b Recognize and comprehend the Develop vocabulary skills and u contexts. Analyze and interpret the data w Acquire effective LSRW skills v Demonstrate strong communication	professe wo	ssional rds app orrect us mergin	oropriat sage of g techn	ely in diff grammar ology	erent a	
UNIT I							9 Hrs

Listening- Listening to Short Conversations (Formal and Informal)

Speaking – Introducing Oneself and Others

Reading – Skimming and Scanning-Reading Comprehension Passages and Answering Multiple Choice Questions

Writing - Leave/On Duty application, Bonafide Certificate-requisition, Check list, Instructions

Grammar & Vocabulary - Parts of Speech, Articles, Prefixes and Suffixes

UNIT II 9 Hrs

Listening – Listening to Telephonic Conversations

Speaking –Greetings and Welcome Address

Reading – Predicting the Content of a Given Article – Newspaper Articles

Writing- Recommendations, Composing E-Mail, Letter Writing- Invitation letter

Grammar & Vocabulary – Sentence Pattern, Tenses, British Terms and American Equivalents

UNIT III 9 Hrs

Listening - Listening to Talks and Note taking

Speaking – Role Play

Reading –Cloze Reading and Fill up the Gaps

Writing - Letter Writing - Permission Letter (In-Plant Training/Industrial Visit), Business letters- Calling for Quotation and Placing Order

Grammar & Vocabulary -If Conditionals, Abbreviations and Acronyms

UNIT IV 9 Hrs

Listening - Listening to Situation Based Dialogues

Speaking – Talking part in Casual Conversation

Reading - Reading Advertisements

Writing – Paragraph Writing, and Job Application

Grammar & Vocabulary – Concord, Gerunds and Infinitives, Synonyms and Antonyms

UN	NT V	9 Hrs
Lis	tening – Listening to Academic lectures	
_	eaking - Describing Objects	
	ading – Transcoding (Conversion of Flow Chart, Bar chart, Pie chart into a paragraph	1)
	riting –Review writing (Films & Books), Essay Writing	
	ammar & Vocabulary – Modal Verbs, Voice- Active Voice, Passive Voice and I	mpersonal Passive, Question
tag	s and Nominal Compounds	
	Total hours	45

Objective(s)	 To understand engineering drawings upon and projections. To develop skills in freehand sketching. To draw accurate orthographic, section and Computer-Aided Design (CAD) recompleted to a poly CAD software in developing. To understand the application of solid through practical CAD exercises. 	g and vinal, and nethods, engine	isualizi isome ering g	ing er tric d	ngineering rawings u	g components. using conventional
	Evamination Pattern: Th	nanratic	al Mod	ΔF		

Examination Pattern: Theoretical Mode

UNIT I Plane Curves and Free Hand Sketching

HOURS

15

Curves used in engineering practices:

Conics – Construction of ellipse, Parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of squad and circle – Drawing of tangents and normal to the above curves. **Free hand sketching:** Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT II Projection of Points, Lines and Plane Surfaces

HOURS

15

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Projection of polygonal surface and circular lamina inclined to both reference planes.

Examination Pattern: Practical Mode

UNIT III Projection of Solids

HOURS

6

Projection of solids: prisms, pyramids, cylinders, cones (axis inclined to one plane).

Experiments using CAD

- Projection of a cylinder with its axis inclined to HP
- Projection of a cone with its axis inclined to VP

UNIT IV Section of Solids and Development of Surfaces

HOURS

12

Sectioning of solids (prisms, pyramids, cylinders, cones) using inclined cutting plane to one reference plane and perpendicular to the other – True shape of section. Development of lateral surfaces including solids with cylindrical cutouts.

Experiments using CAD

- Sectional view of a truncated cone and cylinder
- Sectional view of a prism and pyramid
- Development of lateral surfaces of simple and truncated solids (prisms, pyramids, cylinders and cones)
- Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNIT V Isometric and Perspective Projections

HOURS

12

Isometric scale, projection of solids (prisms, pyramids, cylinders, cones) – Perspective projections using visual ray method.

Experiments using CAD;

• Isometric projection of a cylinders and cones

Outcomes	 Illustrate the concepts of DC circuits to compt Describe the constructional features and work Discuss the characteristics and control scheme 	ing process of E	oltage, inciple Electric micro	Current e of Elect cal drive ocontrol	ctrical mach es lers							

Electrical circuit elements (R, L and C)-Dependent and independent sources – Ohm's Law- Kirchhoff's laws - mesh current and node voltage methods (Analysis with only independent source) - Phasors – RMS-Average values-sinusoidal steady state response of simple RLC circuits. Types of wiring- Domestic wiring - Specification of Wires-Earthing-Methods-Protective devices.

UNIT II Electrical Machines and Drives

9

DC generator Constructional details – EMF equation- Methods of excitation- Principle of operation of D.C. motor – Back EMF and torque equation – Starting of D.C. motors – Three phase and Single phase induction motors(only qualitative treatment)- Types of Electric Drives- Speed-Torque characteristics of various types of load and drive motors- Speed Control Of Electrical Drives(Qualitative Approach Only)

UNIT III Semiconductor Devices and Microcontrollers

9

Basic Electronic Components: Resistance - Inductor - Capacitor -Types, Functions, Symbols - Color coding of Resistance - Review of insulator, conductor and semiconductor -Semiconductor types - Drift and Diffusion Currents - Study of CRO- Construction of PN junction diode- V-I characteristics of PN junction diode- Zener diode as voltage regulator - Biasing LED- Switch mode Power Supply-8051 Architecture and Programming- PIC Microcontroller

22EE13102	Fundamentals Of Electrical And Electronics Engineering (Integrated Course)	3	0	2	4	100								
	To learn the concepts of DC circuits and wiring connecti	ons.												
Objective	To understand the basic concepts of Semiconductor Devi	ice												
Objective	 To develop skills to interface I/O devices such as key Interrupt Controller, ADC and DAC with 8051 	board	l, disp	olay, Tr	affic light,	Programmable								
	• Illustrate the concepts of DC circuits to compute Voltage	, Curr	ent ar	nd Resis	stance									
	Describe the constructional features and working princip	le of E	Electri	cal mac	chines									
Outcomes	Discuss the characteristics and control schemes of Electrical drives													
	Explain the functions of semiconductor devices and microcontrollers													
	Design the microcontroller based systems for practical applications													
UNIT I	Basic Circuits and Domestic Wiring					9								
Electrical circ	uit elements (R, L and C)-Dependent and independent source	ces –	Ohm ³	s Law-	Kirchhoff'	s laws - mesh								
current and no	de voltage methods (Analysis with only independent source)	- Pha	sors -	- RMS-	Average va	lues-sinusoidal								
steady state re	esponse of simple RLC circuits. Types of wiring- Domestic	c wiri	ng -	Specifi	cation of V	Vires-Earthing-								
Methods-Prote	ctive devices.													
UNIT II	Electrical Machines and Drives					9								
DC generator	Constructional details – EMF equation- Methods of excitation-	- Princ	iple o	of opera	tion of D.C	. motor – Back								
-	ue equation - Starting of D.C. motors - Three phase and Si		_	_										
treatment)- Ty	rpes of Electric Drives- Speed-Torque characteristics of vari	ious ty	ypes	of load	and drive	motors- Speed								
Control Of Ele	ctrical Drives(Qualitative Approach Only)													
UNIT III	Semiconductor Devices and Microcontrollers					9								
Basic Electron	ic Components: Resistance - Inductor - Capacitor -Types, Fund	ctions,	Sym	bols - 0	Color coding	g of Resistance								
- Review of in	nsulator, conductor and semiconductor -Semiconductor types -	Drift a	and D	iffusior	Currents -	Study of CRO-								
Construction of	of PN junction diode- V-I characteristics of PN junction diode	e- Zen	er dic	de as v	oltage regu	lator – Biasing								
LED- Switch 1	node Power Supply-8051 Architecture and Programming-PIC	Micro	contro	oller										
	LIST OF EXPERIMENTS													
1	Assembly Language Programming for arithmetic operations	using	8051											
2	Assembly Language Programming for control instruction Ascending/ Descending order) using 8051	ction	(Incr	ement/I	Decrement,									
3	Traffic Light Interface					18								
4	Keyboard Interface													
5	Display Interface													
6	Stepper motor controller interface													
				To	tal hours	45

Objectives	 To enable the students to: To define vector function, operators and volume integrals. To learn Laplace transform, invers differential equations. To learn Fourier transforms, inverse convolution theorem and Parseval's ide To understand the functions of a conconformal mapping. To understand the Taylor's and Laure process of evaluating complex integral 	e Foundentity mplex ent's seals.	rier trant to variabl	ansform nsform ous fun e, propo	and its proceed and its proceed and its proceed and pr	roperties to solve operties and apply roblems involving
Outcomes	 At the end of the course the students will be a Solve problems related to vector difference theorems involving them. Describe Laplace transform and it solution of linear differential equation. Compute Fourier transforms, inverse convolution theorem and Parseval's idea. Predict analytic functions, harmonic for Expand the functions as Taylor's a integrals. 	ferentials properties for the second	perties g Lpapla grier tra to vari ons, con	inverse ace transform ous fun formal	Laplace t sform techn and its pro- ctions mapping and	ransform and the iques. operties and apply d its applications.
UNIT-I	Vector Calculus					9+3
Gradient Diverge	ence and Curl – Directional derivative – Irr	otatio	nal and	l solen	oidal vecto	r fields – Vector
integration - Gr	reen's theorem in a plane, Gauss diverger	nce th	neorem	and S	Stokes' the	orem (excluding
proofs). Verificat	ion and application in evaluating line, surfac	e and	volum	e integ	rals.	
UNIT -II	Laplace Transform					9+3
	perties of Laplace Transform, Laplace transform by different methods, convolution the		-			· ·
UNIT-III	Fourier Transforms					9+3
_	al theorem (statement only)-Fourier tra perties-Transform of simple functi		_			
<u> </u>						
UNIT-IV	Analytic Functions					9+3
UNIT-IV	Analytic Functions complex variable, Cauchy-Riemann equat	tions	– Ana	lytic f	unctions –	

Conformal mapping: w= z+c, cz, 1/z, and Bilinear transformation.

UNIT -V	Complex Integration	9+3
Comp	lex integration - Statement and applications of Cauchy's integral theorem and Cauchy'	s integral
formula	(without proof) - Taylor and Laurent expansions -Types of Singularities-Singular	points -
Residue	s - Residue theorem(without proof) - Application of residue theorem to evaluate real in	ntegrals –
Contour	integration.

12.	Journey of Civilization Indus to Vaigai (R.Balakrishnan) (Published by: RMRL) – Reference Book.

COURSE CODE	COURSE NAME	Н	OURS	S/WEEK	CREDIT	MAXIMUM MARKS
22PY22001	Physics Laboratory	L	T	P 3	C 1.5	100
Objective(s)		 (For All Branches) To provide exposure to the students with hands on Physics practices for all branches. 				
OUTCOMES	 Apply experimental techniques to wavelength, particle size, and mate Analyze and interpret experimental modulus, rigidity modulus, and vise Demonstrate proficiency in perfo evaluate electrical and acoustic pro 	rial collidata cosity rming	onstan to det of flug semi	ts using opt ermine mec ids through iconductor	ics and mecha hanical proper appropriate in	nical methods. ties like Young's astrumentation.

- 1. (a) Determination of Wavelength, and particle size using Laser
 - (b) Determination of acceptance angle in an optical fiber.
- 2. Determination of velocity of sound and compressibility of liquid Ultrasonic interferometer.
- 3. Determination of Thickness of a thin wire-Air Wedge
- 4. Determination of wavelength of mercury spectrum spectrometer grating
- 5. Determination of Young's modulus by Non uniform bending method
- 6. Determination of viscosity of liquid Poiseuille"s method
- 7. Determination of Rigidity modulus -Torsional Pendulum
- 8. Determination of Band gap of a semiconductor-PN Diode
- 9. Determination of Young's modulus by Uniform bending method

(Choose Any 7 Experiments)

Objective(s)	 To introduce the students to the conce To identify the hand tools and instrum To teach students how to perform sin To help students perform some simple drilling 	nents nple w	elding,	sheet r	netal and	mouldingoperation

LIST OF EXPERIMENTS

- 1. Planning and cutting of wood.
- 2. Making of carpentry joints (T-joint, Lap-joint, Dovetail Joint)
- 3. Basic pipe connections and Mixed pipe material connection and Pipe connections with different joining components.
- 4. Preparation of arc welding of butt joints, lap joints and tee joints
- 5. Fabrication of sheet metal tray and funnel
- 6. Facing, plain turning and step turning using lathe
- 7. Drilling operations
- 8. Mould with solid, split patterns and loose-piece pattern
- 9. Basic Study: Gas cutting and gas welding
- 10. Demonstration on: Injection moulding

LIST OF EQUIPMENTS

- 1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings. 5 Nos
- 2. Carpentry vice (fitted to work bench) 5 Nos
- 3. Standard woodworking tools- 5 Nos
- 4. Centre Lathe with accessories 5 Nos
- 5. Arc welding machine 4 Nos
- 6. Gas welding machine 2 Nos
- 7. Sheet Metal Work facility- 3 Nos
- 8. Hand Shear 300mm- 2 Nos
- 9. Bench vice set up- 2 Nos
- 10.Standard tools and calipers for sheet metal work set up-2 Nos
- 11.Moulding Table- 4 Nos
- 12. Moulding boxes, tools and patterns- 4 Nos
- 13.Injection Moulding- for demonstration purpose-1 No

Total hours: 45

Outcome(s)

- Fabricate the models of sheet metal and welding joints
- The students will acquire knowledge about moulding.
- Perform facing, plain turning, step turning and drilling.

	To enable the students to,	3	1	0	4	100				
Objectives	 Evaluate the derivatives from finite differences and evaluate single and double integral by numerical integration methods. Study the types of small sample tests. Familiarize the students with design of experiments, correlation and regression analysis 									
 At the end of the course the students will be able to Compute the solution of algebraic and transcendental equations and system of linear equations numerically. Apply the concepts of numerical methods to solve ordinary differential equations. Solve numerical differentiation and integration using finite differences. Analyze testing of hypothesis of small samples. Solve the problems involving design of experiments, correlation and regression analysis. 										
UNIT-I	Numerical Scheems of Solving Equations	S				9+3

(Mandatory Credit Course to All UG Programmes to be offered in III / IV Semester)

Pre-requisites: Universal Human Values 1 (Induction Programme) (desirable)

The foundation course "H-102 Universal Human Values: "Understanding Harmony" may be covered in III or IV semester. This course discusses the role of human beings in their family. It also touches issues related to their role in the society and the nature. During the Induction Program, students would get an initial exposure to human values through Universal Human Values 1. This exposure is to be augmented by this compulsory full semester foundation course. The Course has 5 Modules (5 Units): 30 Lectures and 15 Practice sessions (Tutorials).

1. COURSE OBJECTIVES:

The objectives of the course are:

- (i). Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
- (ii). Understanding (or developing clarity) the harmony in the human being, family, society and nature/existence
- (iii). Strengthening of self-reflection for harmonious relationship in family, society
- (iv). Development of commitment and courage to act as human being in ensuring harmony in nature for co-existence.
- (v). Development of holistic principles of harmony and professional ethics for natural acceptance of human values and observe ethical human conduct.

2. COURSE OUTCOMES:

Upon completion of the Course the Learner will be able to:

- Distinguish between values and skills, and highlight the need for Universal Human Values.
- Describe the need for Harmony and distinguish between happiness and accumulation of physical facilities, etc.
- Relate the value of harmonious relationship in family, society based on trust and respect for happiness and prosperity in their life and profession.
- > Outline the role of a human being in ensuring harmony in nature for co-existence.
- Apply the holistic principles of Harmony and Professional Ethics for natural acceptance of human values and observe Ethical Human Conduct.

Module 1: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

- L 1. Purpose and motivation for the course, recapitulation from Universal Human Values-I (Induction Programme).
- L 2. Self-Exploration—what is it? Its content and process; 'Natural Acceptance' and Experiential Validation-as the process for self-exploration.
- L 3. Continuous Happiness and Prosperity A look at basic Human Aspirations.
- L 4. Right understanding, Relationship and Physical Facility the basic requirements for fulfillment of aspirations of every human being with their correct priority.
- L 5. Understanding Happiness and Prosperity correctly A critical appraisal of the current scenario.
- L 6. Method to fulfill the above human aspirations: understanding and living in harmony at various levels.
- 3 Practice sessions (T1 to T3) To discuss natural acceptance in human being as the innate acceptance for living with

responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

Module 2: Understanding Harmony in the Human Being - Harmony in Myself!

- L 7. Understanding human being as a co-existence of the sentient 'I' and the material 'Body' L 8.
- Understanding the needs of Self ('I') and 'Body'- happiness and physical facility
- L 9. Understanding the Body as an instrument of 'I'(I being the doer, seer and enjoyer) L
- 10.Understanding the characteristics and activities of 'I' and harmony in 'I'
- L 11.Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail.
- L 12. Programs to ensure Sanyam and Health.
- 3 Practice sessions (T4 to T6) To discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease.

Module 3: Understanding Harmony in the Family and Society - Harmony in Human-Human Relationship

- L 13. Understanding values in human-human relationship; meaning of Justice (Nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship.
- L 14. Understanding the meaning of Trust; Difference between intention and competence.
- L 15. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.
- L 16. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals.
- L 17. Visualizing a universal harmonious order in Society-Undivided Society, Universal Order-from family to world family.
- 3 Practice sessions (T7 to T9): Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education, etc. Discuss Gratitude as a universal value in relationships, scenarios. Elicit examples from students' lives.

Module4: Understanding Harmony in the Nature and Existence - Whole existence as Coexistence

- L 18. Understanding the harmony in the Nature.
- L 19. Interconnectedness and mutual fulfillment among the four orders of nature recyclability and self- regulation in nature.
- L 20. Understanding Existence as Co-existence of mutually interacting units in all pervasive space. L 21. Holistic perception of harmony at all levels of existence.
- 2 Practice sessions (T10 to T11): Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology, etc.

Module 5: Implications of the above Holistic Understanding of Harmony on Professional Ethics

- L 22. Natural acceptance of human values.
- L 23. Definitiveness of Ethical Human Conduct.
- L 24. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order.
- L 25. Competence in professional ethics: (a). Ability to utilize the professional competence for augmenting universal human order (b). Ability to identify the scope and characteristics of people-friendly and eco- friendly production systems, (c). Ability to identify and develop appropriate technologies and management patterns for above production systems.

- L 26. Case studies of typical holistic technologies, management models and production systems.
- L 27. Strategy for transition from the present state to Universal Human Order: (a). At the level of individual: as socially and ecologically responsible engineers, technologists and managers (b). At the level of society: as mutually enriching institutions and organizations.
- L 28. Definition of Morals, Values and Ethics Integrity Work ethic Service learning Civic virtue Respect for others Living peacefully.
- L 29. Importance of Caring Sharing Honesty Courage Valuing time Cooperation Commitment Empathy Self-confidence Character Spirituality.
- L 30. Introduction to Yoga and meditation for professional excellence and stress management. *Sum up.*
- 4 Practice sessions (T12 to T15) Include Practice Exercises and Case Studies which will be taken up in Practice (Tutorial) Sessions.
- eg. To discuss the conduct as an Engineer or Scientist, etc.

Total hours = 45

their planes, plan	point –normal and tangential stresses on es of maximum shear stress, analytica herical shells under internal pressure-cha	l metho	d and	Mohr	's circle	method. Stresses in thin				
	ר	Total ho	ours			45				
Outcome(s)	 After successful completion of the course, the student would be able to: Know the fundamentals concepts of stress and strain in mechanics of solids and structures. Analyze beams to determine shear forces, bending moments and axial forces and also they will be in a position to assess the behavior of columns, beams and failure of materials. Design shafts to transmit required power Design springs for its maximum energy storage capacities. Analysis of Stresses in two dimensions in principal stresses, principal strains and Stresses in thin cylindrical and spherical shells under internal pressure.

Objective(s)	 To understand the concepts of kinematic linkages and their motion analysis in the assembly of a system/machine. To understand the concepts on kinematic analysis of gears and gear train, the role of friction in screw jack, clutches and brakes. To understand the dynamic force analysis, method of static and dynamic balancing of machines. To study the undesirable effects of unbalances in rotors and engines. To understand the principles of governors and gyroscopes. 										
UNIT-I	Basics of Mechanisms and Kinematic Ar						9

Objective	 To understand machine members subjected to steady and variable loads. To understand the design of shafts and couplings for various applications. Learn how to design both temporary and permanent joints under various load conditions. To understand the design procedure for helical, leaf springs, and flywheels for vario applications. To Design and select sliding and rolling contact bearings.

			Total hou								
Outcome	Outcome(s) Upon completion of this course the students must be able to: Compute the steady and variable stresses induced in machine elements. Determine the diameter of shafts based on design parameters for various types of couplings. Design of permanent and temporary joints for different loading applications. Develop energy storage element and engine components for real-time applications. Describe the types of bearings and analyze their applications.

22ME25501	Summer Internship Evaluation	0	0	3	1.5	100
Objective(s)	 Students shall develop the habit to work i To provide opportunities for students to environment. To expose students to industrial worki 	o appl	y the		owledge i	n a real world

Industrial case study should be based on the study of some specific case / issue/ problem related to any Industry. Data should be collected from Industry with the objective of studying some specific case / issue / problem. The Collected data should be analysed using knowledge gained in the curriculum. The Result should be worked out and conclusion should be drawn. A group of maximum of four students may be formed for one case study.

Note: Students have to undergo two weeks internship in an industry between 4th and 5th semester. A report consisting of the problem / issues identified methodology of data collection, method of analysis, results and conclusion should be submitted in the prescribed format at the end of the industrial training and the evaluation will be done by a committee constituted by the HOD. Minimum two presentations should be made as a part of internal evaluation. Each student/group of students must present a PPT for about 30 minutes. The presentation of industrial case study in conferences will be encouraged.

	Total hours 45											
Outcome(s)	At the end of the course, the student will be able to:											
	 Use of acquired techniques, skills, and modern engineering tools necessary for 											
	engineering practice											
	 Understand their professional and ethical responsibilities. 											
	 Understanding the impact of engineering solutions in a global, economic, 											
	environmental, and societal context

duties, rights and responsibilities.

• Summarize the features of the Indian Constitution and observe the fundamental

Outcome	• Explain the functioning of Indian parliamentary system at the Center and the responsibilities of important functionaries.
	• Describe the functioning of State Government and important functionaries.
	• Recognize Amendments in Indian Constitution and Judicial review.
	• Illustrate the composition and features of Indian society.

22ME36601	Design and Fabrication Project	0	0	2	1	100
Objective(s)	• The main objective is to give an opportunit fabrication of one or more components of a by them.	•			_	_
Outcome(s)	 Upon the completion of this course the students Design and fabricate the machine element of Demonstrate the working model of the machine 	or the 1	mecha	anical	1	nical product.
	Guideline for Review and E	valua	tion			

The students may be grouped into 2 to 4 and work under a project supervisor. The device/system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

LIST OF EXPERIMENTS							

- 1. Design and testing of direction control circuit using single and double acting cylinder and to demonstrate the working of the circuit.
- 2. Design and testing of pneumatic circuit with double acting cylinder using multiple sequences and to demonstrate the working of the circuit.
- 3. Design and testing of pneumatic circuit with double acting cylinder using push button in electro pneumatic trainer kit and to demonstrate the working of the circuit.
- 4. Design a circuit using timer for controlled retracted motion of a double acting cylinder and to demonstrate the working of the circuit.
- 5. Design and testing of hydraulic circuit with single acting and double acting cylinder by using Hydraulic trainer kit to demonstrate the working of the circuit.
- 6. Speed control of a stepper motor with half step and full step resolution
- 7. Design and demonstrate the sequential circuit using PLC.
- 8. Control the speed of PMDC motor using PID controller interfacing.

	Total hours 45
LIST OF EQU	JIPMENTS (for a batch of 30 students)
1. Basic Pa	neumatic Trainer Kit with Manual controls – 1 No
2. Basic Pr	neumatic Trainer Kit with Electrical and PLC Control -1 No
3. Basic H	ydraulic Trainer Kit- 1No
4. Progran	nmable Logic Controller unit-1 No
Outcome(s)	 Design and analyze pneumatic and hydraulic circuits using single and double-acting cylinders for various industrial applications. Implement and test electro-pneumatic and PLC-based control circuits including timers, sensors, and actuators. Interface and control electrical actuators like stepper and PMDC motors using advanced controllers such as PID and evaluate their performance.

22ME36701	Project Work (Phase- I) 0 0 6 3 100									
Objective(s)	 To practice the steps involved for the selection To train the students for group activities to 	,								
Outcome(s)	The students involves in identifying righ area, making preliminary works towards pl									

The project work shall be an experimental / design and fabrication project on any of the topics of Mechanical engineering interest. The head of the department will decide the framing of the project batches. Each of the batches shall consist a minimum of four students. The topic of the project should be different from his/her mini project. A faculty member will always be supervising each group as an internal guide. In case an industrial project is selected by a batch, in addition to the internal guide, there should be an external guide from the industry.

During this semester, each group is required to select a topic for the project. A project evaluation committee will be constituted by head of the department at the beginning of the semester. A brief report of the chosen project should be submitted before the committee within two weeks from the beginning of the VII semester. The committee will give permission for the project after examining the feasibility. In the event of rejection of the topic by the committee, the students should resubmit a new project topic within one week, and get it approved by the committee. After getting the permission, they have to conduct a detailed literature survey, and collect sufficient information and necessary data.

25% of the total work to be done for the project work has to be completed by end of 7th semester. The same team of faculty will evaluate the project phase-I report. This evaluation will form 50% of the internal assessment mark. The remaining 50% of the internal assessment mark will be given at the end of the 8th semester, at the time of completing the project work.

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM - CIM wheel and cycle - Production												

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM - CIM wheel and cycle - Production concepts and mathematical models - Simple problems in production models - CIM hardware and software - Major elements of CIM system - Three step process for implementation of CIM - Computers in CIM - Computer networks for manufacturing - The future automated factory - Management of CIM - safety aspects of CIM- advances in CIM

UNIT-II Automated Manufacturing Systems

9

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features. Automated Guided Vehicle system – Types & applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance – smart manufacturing – Industry 4.0 - Digital manufacturing – Virtual manufacturing

UNIT-III Group Technology And FMS

9

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies. FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS – FMS applications, Benefits.

UNIT-IV Process Planning

9

Process planning – Activities in process planning, Informations required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chartshowing various activities in generative PP – Semi generative process planning- Comparison of CAPP and Manual PP.

UNIT-V Process Control and Data Analysis

9

Introduction to process model formulation – linear feedback control systems – Optimal control – Adaptive control –Sequence control and PLC& SCADA. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control - Overview of Automatic identification methods – Bar code technology –Automatic data capture technologies. Quality management (SPC) and automated inspection

22ME1530	5 Non-Destructive Testing	L 3	T 0	P 0	C 3	100
	To understand different surface NI					
	To acquire familiarity with Liquid		-			
Objective(s)	• To understand the basic principles				T techniqu	es
Objective(s)	 To know the advantages and limita 	tions of	each t	echnic	ques and ec	quipments.
	• To understand the common type	es of tes	sts and	l defe	cts arising	in different types of
	manufactured products					
UNIT-I	Visual Testing					9
	s of and introduction to destructive and non					
	ination methods, Different visual examinat	ion aids	s-comp	outer	enhanced	system-Standards and
-	s (ASME, ASTM, AWS etc.)					
UNIT-II	Liquid Penetrant Testing					9
-	types and properties of liquid penetrants –	-			_	
	eparation of test materials – Application of po					
	ontrol and measurement of penetrant process v	ariables	– seie	ction	or penetrar	it method - Huorescen
UNIT-III	ing method – solvent removable. Magnetic Particle Testing and Equipm	onts				9
			l	مانده نس	f	
•	ngnetism – ferromagnetic, paramagnetic mater actors – Magnetic Bharkhausen Noise Analy				_	-
	ction of castings and welding – Dry continuous					
particle main		merna	d and r	uet rec	idual meth	ood
		s metno	d and v	vet res	idual meth	
UNIT-IV	Radiography and Ultrasonic testing					9
UNIT-IV X-ray and Ga	Radiography and Ultrasonic testing mma-Ray radiography, Their principles, methods	ods of a	genera	tion, I	ndustrial ra	9 adiography techniques.
UNIT-IV X-ray and Gainspection tea	Radiography and Ultrasonic testing amma-Ray radiography, Their principles, methorniques, applications, limitations- Basic principles	ods of g	genera of sour	tion, I	ndustrial rapagation,	9 adiography techniques types of sound waves
UNIT-IV X-ray and Ga inspection tec Principle of	Radiography and Ultrasonic testing amma-Ray radiography, Their principles, methodichniques, applications, limitations- Basic princut, methods of UT, their advantages and l	ods of good	genera of sour ns, Pic	tion, Index	ndustrial rapagation, so	adiography techniques types of sound waves rial, Various types of
UNIT-IV X-ray and Ga inspection tec Principle of	Radiography and Ultrasonic testing amma-Ray radiography, Their principles, methodiques, applications, limitations- Basic princut, methods of UT, their advantages and I robe- defects in welded products by UT and T	nods of goods of good	genera of sour ns, Pic s deter	tion, Index	ndustrial rapagation, so	adiography techniques, types of sound waves, trial, Various types of
X-ray and Ga inspection ted Principle of transducers/p	Radiography and Ultrasonic testing mma-Ray radiography, Their principles, methods of ut, their advantages and leader obe-defects in welded products by ut and the company of the company	nods of good ciples of imitation hickness	genera of sour ns, Pic s deter	tion, Indexional production produ	ndustrial rapagation, stric Mate on by ultra	adiography techniques types of sound waves trial, Various types of asonic method
X-ray and Gainspection tec Principle of transducers/pu UNIT-V	Radiography and Ultrasonic testing amma-Ray radiography, Their principles, methodiques, applications, limitations- Basic princut, methods of UT, their advantages and I robe- defects in welded products by UT and T	nods of gaciples of imitation hickness arrent to	genera of sour ons, Pic s deter esting e and l	tion, Indexication process to the pr	ndustrial rapagation, etric Mate on by ultrasting, App	adiography techniques, types of sound waves wrial, Various types of sonic method 9 lication and limitation-
X-ray and Gainspection tec Principle of transducers/pu UNIT-V	Radiography and Ultrasonic testing Imma-Ray radiography, Their principles, methods of uttail and principles, imitations and lateral to the properties of th	nods of gaciples of imitation hickness arrent to	genera of sour ons, Pic s deter esting e and l	tion, Indexication process to the pr	ndustrial rapagation, setric Mate on by ultrasting, App	adiography techniques types of sound waves rial, Various types of sonic method 9 lication and limitation Thermal methods of
X-ray and Gainspection ted Principle of transducers/pt UNIT-V Definition of Eddy current	Radiography and Ultrasonic testing Imma-Ray radiography, Their principles, methods of uttail and principles, imitations and lateral to the properties of th	nods of gaciples of imitation hickness arrent to	genera of sour ons, Pic s deter esting e and l	tion, Indexication process to the pr	ndustrial rapagation, etric Mate on by ultrasting, App	adiography techniques, types of sound waves, rial, Various types of sonic method 9 lication and limitation- n Thermal methods of
X-ray and Gainspection ted Principle of transducers/pt UNIT-V Definition of Eddy current	Radiography and Ultrasonic testing Imma-Ray radiography, Their principles, methods of utority, methods of utority, their advantages and leader obe-defects in welded products by utority and the leak and types, Principle, Various methods of testing: Principle, instrument, techniques, see	nods of good ciples of imitation hickness arrent to pressure ensitivity	genera of sour ns, Pio s deter esting e and l	tion, Index production	ndustrial rapagation, setric Mate on by ultrasting, App	adiography techniques, types of sound waves, rial, Various types of sonic method 9 lication and limitation- n Thermal methods of
X-ray and Gainspection tea Principle of transducers/pt UNIT-V Definition of Eddy current	Radiography and Ultrasonic testing Imma-Ray radiography, Their principles, methods in the chniques, applications, limitations- Basic principle- defects in welded products by UT and Tobe- defects in welded products by UT and Tobe- Leak and pressure testing and Eddy culleak and types, Principle, Various methods of testing: Principle, instrument, techniques, see Upon completion of this course, the Learne	nods of good initation hickness arrent to pressure the pr	genera of sour ns, Pios s deter esting e and l //, appl	tion, Independent of the control of	ndustrial rapagation, setric Mate on by ultrasting, App n, limitatio	adiography techniques, types of sound waves, rial, Various types of asonic method 9 lication and limitation- n Thermal methods of

deterministic inventor	Introduction, types of inventories, costs associately problems with no shortages, with shortages. **ms:* Introduction, replacement of items that determined the shortages in the shortages.					•									
UNIT-V	Project management and Queuing models					9									
Project management and PERT techniques	Basic Concept of network Scheduling, Rules for in Project planning and control; crashing of operat aracteristics of Queuing Model, M/M/1 and M/M/S Total hours	ions; re S syster	esource n, cost c	allocati	on.										
Outcome(s)	 Upon completion of this course, the students will able to; Apply the concepts of linear programming models to obtain the optimum solutions under dissimilar circumstances. Calculate the optimal solution of given minimization problems using transportation and assignment Models. Determine the optimum solution from the solutions of given problem and improve the processing time using game theory and sequencing. Compute the economic order quantities of inventories and solutions of replacement of items using inventory control and replacement models. Apply the concepts of network scheduling and effective queue systems using project management and queuing models.

Explosio	ns - Dis	saster management - catastrophe control,	hazaro	d cont	rol, Sa	fety educ	cation and training -							
Factories	Act, Saf	fety regulations Product safety.												
						Total h								
		 Explain the evolution of safety concepts and identify mechanical and fire-related hazards. Analyze chemical hazards and evaluate industrial toxicology and hygiene practices. 												
Outcome	e(s)	 Analyze chemical nazards and evaluate industrial toxicology and hygiene practices. Assess industrial environmental hazards and apply appropriate control and personal protection methods. 												
		 Apply hazard analysis techniques such as FTA, FMEA, HAZOP, and risk assessment. 												
		• Interpret safety regulations and develop strategies for disaster management and safety training.

UNIT-I	Introduction to CAE /CFD					9

Introduction to use of computer in Mobility Product Life Cycle, Software for mobility. Introduction to design process and role of computers in the design process, use of modern computational tools used for design and analysis, Concept of modelling and simulation. CFD as a design and research tool, Applications of CFD in mobility engineering

UNIT-II | CAD and Rapid Prototyping

9

Curves and Surfaces: Geometric modelling curves and surfaces, Wire frame models, Parametric representations, Parametric curves and surfaces, Solid modelling: Fundamentals of solid modelling, Different solid representation schemes, Boundary representation (B-rep), Constructive solid geometry (CSG). Mechanism design and assembly. CAD/CAM Data Exchange Formats: Types of file formats & their exchange, Graphics standards. CAD Data and Programming Techniques for RP: Transformations, Solid modelling for RP, Surface modelling, STL file generation, Defects in STL files and repairing algorithms, Interface formats

UNIT-III Introduction to FEA

9

Basic Concept of Finite Element Method, Ritz and Rayleigh Ritz methods, Method of weighed residuals, Galerkin method. Governing differential equations of one- and two dimensional problems, One Dimensional Second Order Equations – Discretization – Linear and Higher order Elements – Interpolation and shape functions, Derivation of Shape functions and Stiffness matrices and force vectors-Assembly of Matrices - Solution of static problems and case studies in stress analysis of mechanical components using 2D and 3D elements

UNIT-IV Introduction to CFD

9

CFD vs. experimentation; continuity, navier-stokes and energy equations; modelling and discretization techniques; basic steps in CFD computation Various simplifications, Dimensionless equations and parameters, Incompressible inviscid flows, Source panel method, and Vortex panel method. Conservation form of the equations, shock fitting and shock capturing, Time marching and space marching. 3-D structured and unstructured grid generation, mesh smoothing and sensitivity checks

UNIT-V Problem Solving Using CFD

9

45

Total hours

Turbulence Modelling, different turbulent modelling scheme. Incompressible Viscous Flows:, Applications to internal flows and boundary layer flows. Eddy viscosity and non-eddy viscosity models; Vehicle Aerodynamic Simulation Wind tunnel and on-road simulation of vehicles; Simulation of Ahmed and Windsor bodies; Vorticity based grid-free simulation technique; simulation in climatic and acoustic wind tunnels; velocity vector and pressure contour simulation

Outcome(s) Upon completion of this course, the Learners will be able to: • Discuss the basic concept of the CAE /CFD

- Develop the computer aided design and rapid prototyping.
- Discuss the basic concept of Finite Element methods.

	Discuss the concepts of computational fluid dynamics
	Discuss the simulation using computational fluid dynamics.
